Prompt-condition design

Condition	Risk score & macro	Reliability	Network	Role requirement carried by	Output role
Full evidence	✓	✓	✓	instruction	Full evidence-grounded explanation
No-network	✓	✓	✗	not applicable	No firm or sector relational attribution
No-reliability	✓	✗	✓	instruction	No confidence, disagreement or abstention cues
Free-form	score only	✗	✗	not applicable	No evidence list supplied
Required role	✓	✓	✓	instruction + schema field	As full evidence, plus one required field

All five conditions receive the same financial interpretation guide, the same non-advice constraint and the same required output fields.
The required-role condition is byte-identical to full evidence except for one added output field; the parity check in Section 3.6 verifies this.
